

CLD[®] Technology

ENHANCED DURABILITY AND STABILITY

James Hardie has pioneered a breakthrough manufacturing method, CLD Technology. This technology is used to produce products such as Linea™ Weatherboard, Axon® Panel, CLD® Fascia and Trim. CLD Technology enables thicker profiles and delivers enhanced durability and stability when compared with the traditional timber alternatives.

BENEFITS

- Enables thicker profiles while keeping products lightweight.
- Provides enhanced durability and stability.
- Resistant to fire and damage from moisture and rotting when installed and maintained correctly.
- Products can be painted dark colours, even black. Extended paint warranties are available with selected paint manufacturers.

James Hardie light-weight CLD® Fascia and Trim are used for box corners, around windows and doors. James Hardie Trim will help create that classic early Victorian look. Painting these elements in contrasting colours to the main cladding will define them and enhance the design style of your home.

CLD® FASCIA

- Designed to accommodate James Hardie soffit linings.
- 16mm thick pre-primed board.
- Available in 4200mm lengths and 230mm or 180mm widths.
- Tongue and groove ends for flush jointing and allows for minimal wastage.
- Can be fixed using screws or nails.
- CLD® Fascia can be painted dark colours and has extended paint warranties available with selected paint manufacturers.
- 25 year product warranty.

CLD® TRIM

- 16mm thick CLD® fibre cement used for exterior trim around windows, doors and boxed corners.
- Available in 2600mm and 4200 lengths.
- Ideal for garage door reveals.
- Pre-primed with acrylic primer for faster finishing.
- Able to be painted dark colours and has extended paint warranties available with selected paint manufacturers.
- 25 year product warranty.
